
a1
Anti-de Sitter ($C_{AdS} = -55.3$)
slope = +0.1
widths 1.4, 3.3, 8.5 mag
a2
Hubble ($C_H = -43.0$)
slope = −3.1
widths 2.3, 6.8, 13.0 mag
b1
slope = −0.5
widths 1.4, 3.2, 6.3 mag
b2
slope = −3.5
widths 2.0, 4.5, 11.5 mag
SDSS absolute magnitude
DESI absolute magnitude
$\log_{10} z$
central 68%
central 95%
central 99.7%
galaxy median
quasar median
least-squares fit
10^{-6} 10^{-5} 10^{-4} 10^{-3}
fraction of sample per cell
